

Tired of High Home Heating Costs?

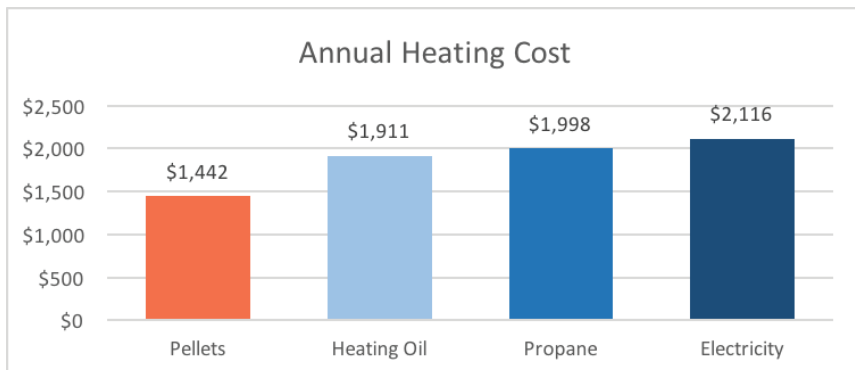

Wood pellets are a clean-burning biomass product created from raw forestry materials and recycled wood waste, which is considered as a renewable heating alternative for households and organizations. It is not only better for the environment by reducing the use of fossil fuels, but depending on where you are, it's much cheaper and simpler to use than most alternatives.

Why Wood Pellets are a better heating alternative?

- Reduce heating costs
- Help in the fight against climate change with low greenhouse gas emissions
- Improve indoor and outdoor air quality
- Non-toxic, safe and convenient
- Provide efficient and consistent energy supply

Take a 1,500 square foot house in Northwestern Ontario as an example, heating with wood pellets has the lowest annual cost compared to other heating alternatives.
